Rebuilding the Differential

Replacing Bearings and Races

- Use a bearing puller to remove old bearings. - Clean the housing thoroughly. - Install new races using a race driver or appropriate press. - Mount new bearings onto the carrier and pinion.

Installing the Ring and Pinion Gears

- Set the pinion gear onto the shaft. - Adjust the pinion depth using shims to achieve the correct gear mesh pattern. - Install the ring gear onto the carrier and tighten bolts to manufacturer torque specifications. - Use a gear marking compound to check gear contact pattern and adjust shims accordingly.

Setting Gear Backlash and Preload

- Use a dial indicator to measure backlash. - Adjust shims on the carrier to achieve the specified backlash. - Install bearing caps and torque to specifications. - Check pinion bearing preload with a torque wrench; adjust shims until correct preload is achieved.

Reassembling the Carrier

- Reinstall side gears, spider gears, and shims. - Ensure proper gear contact pattern. - Lubricate gears with gear oil before installation.

Reinstallation and Final Checks

Reinstalling the Carrier

- Carefully place the carrier assembly back into the housing. - Reinstall and torque the bearing caps to spec. - Reinstall the ring gear bolts and torque correctly.

Sealing and Cover Installation

- Replace the differential cover gasket or apply a suitable sealant. - Reinstall the cover and tighten bolts evenly to prevent leaks.

Refilling Gear Oil and Testing
