Understanding Plant Factories and Indoor Vertical Farming

What Is a Plant Factory?

A plant factory is a highly controlled environment agriculture (CEA) system designed to produce crops indoors, typically using artificial lighting, climate control, and automation. Unlike traditional farming, plant factories operate within enclosed structures—such as warehouses or specially designed facilities—where conditions like temperature, humidity, CO₂ concentration, and light spectrum are precisely regulated to optimize plant growth.

Indoor Vertical Farming Explained

Indoor vertical farming involves stacking multiple layers of crops vertically within a confined space, maximizing land use efficiency. When integrated with plant factory concepts, it enables year-round production regardless of external weather or seasonal variations. Key features include:

- Multiple crop layers stacked vertically.
- Use of artificial lighting (LEDs, fluorescent, or other sources).
- Precise

environmental control for each layer. - Automation for watering, nutrient delivery, and climate regulation.

Technological Foundations of Plant Factories
